## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

1. It is unclear to what the applicant claims, the film or the disposable container and also unclear to what the relationship is between the rigid regions and the film. It is unclear how the film is structurally transformable and inert with respect to the film. Further, it is unclear to what the relationship is between the film and the passive actuator and how the product is contained in the actuator and conveniently energized creating a structural transformation. It is also unclear how the film is transformed from flexible composition to a rigid composition. Furthermore, applicant is introducing process limitations into the product claim and hence, such are given little patentable weight. In general, the claim is vague and indefinite. The claim should positively set forth the structure of a film or container rather than a mere desired result. There is no structure or composition in the claim. The clarification and/or correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 45 is rejected under 35 U.S.C. 102(b) as being unpatentable by Gifford et al. (3648834).

Gifford et al. discloses a film for obtaining structurally stable objects, in particular disposable container characterized by comprising at least in those regions which in the obtained object are required to be substantially rigid a substance which is structurally transformable and inert with respect to the film and at least one passive actuator thereof, the actuator, when conveniently energized starting a structural transformation of the substance to convert the regions from flexible to substantially rigid (col. 1 lines 61-73).

**Conclusion**

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jane J Rhee whose telephone number is 703-605-4959. The examiner can normally be reached on M-F.
